

Guardian AI Campaign Plan Dashboard

Overview

Guardian AI is an intelligent marketing automation platform designed to manage campaigns through a vertical pipeline system. Each stage represents a step in the campaign lifecycle, combining the functionality of Meta Ads Manager, Notion, and ChatGPT with real-time AI automation and decision-making.

Vertical Pipeline Structure

1. Campaign Input
2. AI Content Generation
3. Market Fit & User Preferences
4. Brand Safety & Policy Check
5. Publishing Engine
6. Paid Ads Integration
7. Performance Tracking
8. AI Report Generation
9. AI Recommendations

Each stage is displayed as a card block connected visually with arrows or progress flow.

1. Campaign Input

Fields

- Campaign Name
- Product / Service
- Campaign Goal: Sales, Leads, Traffic, Awareness
- Target Audience: Age, Gender, Interests, Location
- Budget Input

 - Scale high-performing ads
 - Pause low-performing ads
 - Suggest new creatives
-

Output Grid

Columns

- Campaign Name
 - Platform
 - Status
 - Risk Score
 - ROI Prediction
 - Actions (Edit / Publish / Pause)
-

Integrations Hub

Module: “Integrations & Connections”

Includes

- Google Ads
- Meta Ads
- Instagram
- LinkedIn

Each Integration

- Connect / Disconnect
 - API Key input
 - Status indicator
-

System Flow Logic

1. User starts campaign
 2. AI generates content
 3. AI checks compliance
 4. If approved → publish
 5. Run ads + track performance
 6. Generate report
 7. AI suggests improvements
 8. Loop optimization
-

UI/UX Design Requirements

- Vertical pipeline layout
 - Card-based UI
 - Smooth transitions
 - Modern design (glassmorphism + soft shadows)
 - Color-coded states:
 - Green = Success
 - Yellow = Review
 - Red = Risk
 - Responsive design (mobile + desktop)
-
